Objective

AI product manager looking for a position at tech companies, where I can apply my artificial intelligence experience, building machine learning pipelines, and systems development skills to support next-generation project growth and success.

Experience

ML Engineer, DetectNow, remote (Mar. 2020 - Now)
- Wrote the data collection protocol for clinical trials.
- Implemented a sound classification model.
- Cleaned crowdsourced audio data with Audacity.
- Applied differential privacy concept for the collected data.

Junior ML Engineer, Omdena, remote (Jan. 2020 - Mar. 2020)
- One of 45 collaborators from 27 countries.
- Built an ethical AI-based credit scoring system so that people get access to fair and transparent credit.

ML Intern, iNetworks, Cairo (Jul. 2019 – Oct. 2019)
- Scraped 10 Gb of data.
- Built a full automated ML pipeline.
- Deployed three ML models using Flask RESTful API.

Trainee, Huawei ICT Academy, Cairo (Sep. 2019)
- Won a bronze medal at Huawei ICT challenge.
- Training Scope was HCIA-Storage V3.0 and HCIA-Storage V3.0 Lab Guide.

Trainee, IBM, Cairo (Jul. – Aug. 2018)
- Attended two weeks of training on Artificial Intelligence and IBM Watson.
- Attended two weeks of training on Business Process Development.

Education

Bachelor of Engineering, Ain Shams University, 2022
- Department : Computer and Systems Engineering.

LD - General English Courses, AUC - School of Continuing Education, (2017 - 2020)
- Completed English for Professional Purposes B2 on the Common European Framework of Reference.

Winter School, Innopolis University, Dec. 2020
- Attended a four - day intensive course about the powerful combination of Robotics and Machine learning.

Key Projects

---

[1] Credit Scoring: Banking the unbanked!: (Banking the unbanked) to leveraging the potential of machine learning for credit scoring to provide millions of people with funding opportunities.

[2] Employees Skill Gap: a machine learning and AI algorithms to make sure that you'll identify the gap between your skills and market needs.

[3] Real-time face detection: this was aiming to study customers' habits by recording the time when customers come to the store and register non-customer encodings in the database.

[4] Interactive chat-bot: It was built based on voice user interface principles. Through Virtual Reality, Natural Language Understanding, Speech to Text and Text to Speech techniques, I created 3D interactive artificial humans with Amazon Sumerian, Lex and Polly.

Extra Curricular Activities

I participated in more than 42 Hackathons with Riseup, Vodafone, DAN, Health 2.0 ,and robusta. Moreover, my team was #CodeVsCovid19 and HackZurich winner.

- Devpost
- Badgewell

I am interested in Entrepreneurship. Thus, I attended **ASU Innovates** and **NilePreneurs** Cycle 2.

Courses

- AI Programming with Python Nanodegree Program, Udacity
- AI product management Nanodegree Program, Udacity
- Microsoft Scholarship Foundation course Nanodegree Program, Udacity
- Bertelsmann Technology Scholarship Nanodegree Program, Udacity
- Intel® Edge AI Scholarship Foundation Course Nanodegree Program, Udacity
- Secure and Private AI Scholarship Challenge Nanodegree Program, Udacity
- PyTorch Scholarship Challenge Nanodegree Program, Udacity

Skills

Programming Language : Python
Machine Learning Frameworks: PyData ecosystem, Keras, Pytorch, OpenCV
Databases : SQL(PostgreSQL), NoSQL(MongoDB)
Web Scraping : BeautifulSoup, Selenium
Software Engineering: Git , Docker, Flask
